

*Ms. Lela Perkins, P.E. has 20 years of experience developing water and wastewater planning studies, focused on water resources and facility planning. She has a Master of Science degree in Civil Engineering and a Bachelor of Science degree in Environmental Engineering, both from Colorado State University. She also served as Vice-President of the American Water Works Association from 2012-2015. Through a binational framework, Lela is currently leading a study team exploring desalination opportunities along the Sonoran Coast of the Sea of Cortez with the potential for increasing delivery or exchange of Colorado River water benefitting both Mexico and the United States. The results of this study may be compared to the investigations of other new water sources projects to develop an augmentation strategy for Colorado River supplies.*
